

CT3535

Assignment 1

1. You are required to write a Junit 4 test case for a Book class, which has the following fields:

```
private String title;  
private String author;  
private ArrayList<Book> bookList;
```

The Book class will have appropriate getters and setters for each private field and will also override toString(). You are required to write a number of tests for the following:

- Book()
- toString()
- add and remove from ArrayList

Note: You should use each of the following annotations @Before, @After @Ignore and @Test.
